Category Name Client(CLS) Design

Actionee ECS

Sub Category

Subject Unclear relationship of SDPS toolkit to Client

Description of Problem or Suggestion:

The relationship of the SDPS toolkit to the Client is unclear and confusing. To start with, it appears to refer to the SDP Toolkit, yet the name (SDPS) suggests a toolkit to access the whole of the SDPS rather than the Data Processing subsystem. Also, this toolkit is primarily for algorithm developers, rather than the general science users. Most importantly, the toolkit is an API for science processing and does not contain GUI interfaces or hooks, so it does not seem to fit well at all with the Client.

Originator's Recommendation

Rename the SDPS Toolkit to be the SDP Toolkit, if that is in fact all it is. Clarify its intended users. Clarify its relationship to the client, if there is one that makes sense, or remove it from that Subsystem entirely.

The SDPS toolkit referenced in the Client subsystem is actually the SDP Toolkit.

This toolkit can be installed as part of the ECS Client installation on a users workstation. However, this does not make it part of the Client Subsystem. We agree with the recommendation to remove it from the Client Subsystem.
